

EDCO Magna Trap Tool Series

Grind

Coating, Sealers, and light Concrete Grinding

For this application grinding is done with Diamond Tooling using different grit levels and bonds to allow a clean surface to allow new coating materials to bond to.

Double Dot Diamond Tooling Single and Double Dot Tooling

Double the amount of diamond provides the longest life and smoothest grinding action. Professional quality for the best job results.

Our most common rental diamond tool is Medium Bond, 30 grit diamond

Single Dot Diamond Tooling

Grinds faster and more aggressively than a Double Dot. Use on smaller machines like TL-9, SEC and 2EC when you want to increase the production rates. It offers faster grinding rates but shorter tool life.

Double Dyma Segment – 18 grit Dyma Segment

This coarser 18 grit diamond provides fast removal rates and a deeper scratch pattern. This allows coatings a better adhesion when applied to concrete.

Retail Grinding Tool

This tooling is sold rather than rented. It offers customers a less expensive General Purpose option for smaller jobs, or for customers that are not sure what they are removing from the concrete. There are three single segment tools per package.
